National Ref : UNI1613255
Title : Photocatalysis - Continuous flow test methods - Determination of the abatement capacity of photocatalytic materials and filters for toluene in air
Scope : This standard specifies a dynamic continuous flow and in-line detection method to evaluate the performance of photocatalytic inorganic materials contained in cement and/or lime mortars or ceramic based matrices, paints or materials deposited as thin films or coatings on a variety of substrates for the photocatalytic abatement of Toluene in the gaseous phase. This method also applies to samples used with flow perpendicular to the surface or flow permeating the surface, such as polymer and paper filters, honeycomb structures and the like using the described sample holder.
 The performance of the photocatalytic sample under examination is evaluated by measuring the degradation rate of toluene and detectable volatile VOCs possibly produced in the photocatalytic process according to the method specified here using the CSTR reactor already used in the UNI EN 16980-1 standard method, which allows the calculation of the photocatalytic abatement rate from conversion observed by eliminating mass transfer effects and reactor parameters. The surface-normalized photocatalytic abatement rate is a property of the tested material and allows distinguishing the photocatalytic activities of various samples on an absolute scale with physical and engineering significance.

Title : Photocatalysis - Continuous flow test methods - Determination of the abatement capacity of photocatalytic materials and filters for formaldehyde (CH₂O) in air
Scope : This standard specifies a dynamic continuous flow and in-line detection method to evaluate the performance of photocatalytic inorganic materials contained in cement and/or lime mortars or ceramic based matrices, paints or materials deposited as thin films or coatings on a variety of substrates for the photocatalytic reduction of formaldehyde in the gaseous phase. This method also applies to samples used with flow perpendicular to the surface or flow permeating the surface, such as polymer and paper filters, honeycomb structures and the like using the described sample holder.
The performance of the photocatalytic sample under examination is evaluated by measuring the overall degradation rate of formaldehyde (CH₂O) and formic acid (HCOOH) possibly produced according to the method specified here using the CSTR reactor already used in the UNI EN 16980-1 standard method, which allows the calculation of the photocatalytic abatement rate from conversion observed by eliminating mass transfer effects and reactor parameters. The surface-normalized photocatalytic abatement rate is a property of the tested material and allows distinguishing the photocatalytic activities of various samples on an absolute scale with physical and engineering significance.

ICS : 13.040.20, 87.040,
87.060.20, 91.100.10
National Ref : UNI1613257
Title : Photocatalysis - Continuous flow test methods - Determination of the abatement capacity of photocatalytic purification devices for VOCs in air
Scope : The standard specifies a dynamic method in continuous flow and in-line detection to evaluate the performance of equipment and systems for the photocatalytic purification of air, such as fans, air conditioners and various abatement systems equipped with their own power supply, their own forced ventilation and their own internal systems of lighting, with dimensions such as to be incorporated into the body of the reactor, the volume of which can vary from tens to a few hundred litres.
The performance of the photocatalytic purification system under consideration is evaluated by measuring the overall degradation rate of the toluene or VOC mixture, and of the detectable volatile VOCs possibly produced in the system, at a concentration of a few hundred ppbv, according to the method specified here using a CSTR reactor, which allows the calculation of the photocatalytic abatement rate from the observed conversion. The photocatalytic abatement rate on an absolute scale with physical and engineering significance is an important technical specification of the tested system

Title : BIM Management System - Requirements - Part 8: Requirements of an organization's digitized process management system
Scope : This standard defines the requirements for a BIM Management System (SGBIM) that an organization must implement to improve the efficiency of the process of planning, design, production, operation and eventual decommissioning of the work. The purpose is to provide functional elements for the certification of the organization's BIM management system, whether it is a contracting or commissioning organization.
 The document is prepared consistently with the UNI EN ISO19650 series and UNI EN ISO 9001:2015 so that Organizations implementing a Quality Management System (QMS) can easily integrate it. The certification of SGBIM can support the preliminary fulfillments regarding the organizational act related to public administration.

Title : Graphical symbols – Safety colours and safety signs – Part 1: Design principles for safety signs and safety markings (ISO 3864-1:2011)

Scope : This part of ISO 3864 establishes the safety identification colours and design principles for safety signs and safety markings to be used in workplaces and in public areas for the purpose of accident prevention, fire protection, health hazard information and emergency evacuation. It also establishes the basic principles to be applied when developing standards containing safety signs.

This part of ISO 3864 is applicable to all locations where safety issues related to people need to be addressed.

However, it is not applicable to the signalling used for guiding rail, road, river, maritime and air traffic and, generally speaking, to those sectors subject to a regulation which may differ.

NOTE Some countries' statutory regulations might differ in some respect from those given in this part of ISO 3864.

 Title : Central gas distribution plants- Part 3: Pipelines between gas distribution plants and consumption connexions
 Scope : This Austrian Standard specifies requirements for pipelines (hereinafter referred to shortly as cables) to be fixed between central gas distribution plants and terminal units according to ÖNORM M 7387-1 or ÖNORM M 7387-2.
 It shall be applied to compressed, liquefied under pressure or dissolved under pressure as well as deep-frozen liquefied gases mentioned in ÖNORM M 7387-1 and ÖNORM M 7387-2, if the liquefied gases are transmitted in gaseous state.
 For other gases and gas mixtures, the present Austrian Standard may be applied analogously.

 This Austrian Standard does not apply to
 - gas extinguishing systems according to TRVB 152/15 S
 - gases subject to the Decree on Liquefied Gases (FGV 2002)
 The requirements for cables for gases for medical purposes are specified in ÖNORM EN ISO 7396-1.

Title : Gas infrastructures - Gas pressure and measurement control stations connected with transportation system - Part 2: Measuring system surveillance
Scope : This standard prescribes the operating criteria of the measuring system surveillance, in order to ensure the required level of measurement accuracy and reliability / safety of the system for the duration of expected technical life.
 It applies to measuring systems for natural gas with a density not greater than 0.8, with reference to UNI 9167-3, installed in:

- a) Interconnection points with foreign transportation systems;
- b) Entry and exit points from/to storage sites;
- c) Entry points from national production and biomethane production;
- d) Entry points from LNG regasification terminals;
- e) Interconnection points between transportation networks;
- f) Redelivery points to distribution networks and to end customers directly connected to the transportation network;

 Measuring systems of biomethane injection in the natural gas network, shall also comply with the relevant requirements of UNI/TS 11537, in addition to the requirements of this standard.
 This standard integrates the requirements of UNI 9571-1 for the aspects of the measuring system surveillance.
 It also applies to measuring systems built, installed and operated prior to the publication of this standard.

Title : Winter sports equipment - Release bindings for alpine downhill-skiing - Adjustment scale for release values
Scope : The adjustment scales in this standard apply to the release torques and forces of safety bindings according to ISO 9462. By assigning certain release torques and forces in the two main release levels to the same adjustment scale, the setting for the respective binding is simplified and made independent of the make, as far as the adjustment scales 1 to 10 are used.

ICS :	03.100.01		
National Ref :	UNI1613350		
Title :	Non-regulated professions - Risk manager - Knowledge, skill, autonomy and responsibility requirements		
Scope :	<p>The standard defines the requirements relating to the professional activity of the risk manager, i.e. the professional figure dedicated to the coordination of integrated risk management in the organisation. These requirements are specific, starting from the specific tasks and activities and the identification of the contents, in terms of knowledge and skills, also in order to identify the level of autonomy and responsibility in line with the National Qualification Framework (NQF). These requirements are also expressed in such a way as to facilitate and contribute to making the related conformity assessment processes as homogeneous and transparent as possible. The requirements refer to a risk manager working in organisations of any size and of any nature (profit, non-profit, public, private). These requirements make it possible to determine a common approach to coordinating the management of any type of risk, not dedicated to a particular sector or industry. This standard could be complemented by other complementary documents providing additional requirements for specific sectors. For example, for the banking and financial sectors we refer to UNI 11869:2022, which adheres to and applies specific standards and methodologies for those sectors.</p>

Title : Whistleblowing management systems — Guidelines
Scope : This document gives guidelines for establishing, implementing and maintaining an effective whistleblowing management system based on the principles of trust, impartiality and protection in the following four steps:
a) receiving reports of wrongdoing;
b) assessing reports of wrongdoing;
c) addressing reports of wrongdoing;
d) concluding whistleblowing cases.
The guidelines of this document are generic and intended to be applicable to all organizations, regardless of type, size, nature of activity, and whether in the public, private or not-for profit sectors.
The extent of application of these guidelines depends on the factors specified in 4.1, 4.2 and 4.3. The whistleblowing management system can be stand-alone or can be used as part of an overall management system.
